Summary

Software engineer experienced in full-stack development and building AI-powered products. Currently seeking a final-year internship where I can contribute to challenging projects and further develop my technical skills.

Work Experience

Software Engineer *RaiseLabs, Nov 2025 – Present, Remote*

- Build AI-powered features for TeachingHero, including an AI assistant and agentic workflows that automate end-to-end course generation and content creation.
- Extend Oterax LLM services with structured outputs, streaming, BYOK support, model preferences, and observability using **Flask**, **Vercel AI SDK**, **Pydantic AI**, and **Pydantic Logfire**.
- Integrate **Cloudflare R2** for generated media and **Cloudflare Turnstile** for bot protection and secure user verification.

Software Engineer Intern *TAHO AI, Jun 2025 – Jul 2025*

- Designed the transport layer with **RabbitMQ** using an RPC pattern to ensure efficient inter-service communication.
- Developed the user interface with **Next.js**, integrating **React Query** for data fetching and **Zod** for schema validation.
- Defined and configured the **MCP server** for AI agents.

Full-Stack Developer *Digital Bundle, Aug 2024 – Nov 2024*

- Built responsive **Vue.js** and **Tailwind CSS** interfaces for Levii, an ERP platform that streamlines and automates core business operations.
- Secured RESTful endpoints via custom Laravel middleware and JWT authentication, ensuring data integrity.
- Architected advanced search, filtering, and pagination mechanisms to support efficient data retrieval and scalability.

Projects

i18n-mcp — Safe i18n Automation MCP Server *Jun 2026 – Jul 2026*

- Built a **Go** MCP server with 16 tools over stdio and Streamable HTTP for locale detection, translation audits, batch planning, and static dead-key analysis.
- Implemented preview-first writes with project-root guards, atomic updates, source-drift detection, and validation for placeholders, ICU syntax, HTML-like tags, and Markdown.
- Built **GitHub Actions** CI/CD for race-tested builds, linting, security scans, automated tagging, and **GoReleaser** releases across Linux, macOS, Windows, and Docker.

Tanilytics — Privacy-First Blog Media Analytics Platform *Mar 2026 – Jun 2026*

- Built an extensible **TypeScript** analytics SDK with batching, retries, and plugins, including an npm adapter that captures embedded YouTube events.
- Developed a high-throughput **Go**/**Fiber** ingestion service with schema validation, RedisBloom deduplication, and durable asynchronous publishing to **Redpanda**.
- Built a stream-processing pipeline for event enrichment and anonymization, real-time state in **Redis**, and analytical storage in **ClickHouse**.

E-Sihha — Microservices-Based Healthcare Platform *Mar 2025 – May 2025*

- Implemented microservices with **NestJS**, using **RabbitMQ** as the transport layer for inter-service communication.
- Leveraged polyglot persistence by integrating **PostgreSQL** and **MongoDB**, each chosen per microservice use-case.
- Integrated **Clerk** for secure authentication and role-based access control across services.

Education

National Institute of Applied Science and Technology, M.S. in Software Engineering Sept 2022 – Sept 2027

- **Coursework:** Web Development, Big Data, Algorithmic Complexity, OOP, Distributed Systems, System Design, ...

Technical Skills

Languages: TypeScript, JavaScript, Go, Python
Frameworks & Libraries: Node.js, React, Next.js, NestJS, Flask, FastAPI, Tailwind CSS, Pydantic AI, Vercel AI SDK
Data & Messaging: PostgreSQL, Supabase, MongoDB, ClickHouse, Redis, Redpanda, RabbitMQ
DevOps: Docker, Git, GitHub Actions, GoReleaser
